

Distiller - Extractor

Developed from the company creation, LDS distillers extractors have been constantly improved.

Conceived to quickly and simply extract constituent elements from liquids, as well as for alcoholic distillation, they assure the obtaining of pure extracts and distillates, and for more precise titrations and analysis.

Possible methods

- **Duclaux-Gayon type :**
Simple distillation method for volatile acidity, with direct heating of the flask, by contact with the flame.
Process time : about 20 minutes
Classical use : 1 to 10 analysis / week
- **Mothe type :**
Distillation method with water steam training.
Process time: between 7 and 12 minutes
Classical use : 1 to 10 analysis / day
- **Direct heating stills :**
Distillation method for alcohol with direct heating.
Process time: 20 minutes
Classical use : 1 to 10 analysis / week

Duclaux-Gayon
Ref. 116301

Laboratory still
for high degrees
Ref. 140000H

Mothe VA
Ref. 118300E

Mothe VA
Distillation
Ref. 140300E

Possible extractions

- Volatile acidity extraction (Mothe & Duclaux-Gayon)
- Volatile acidity extraction and alcoholic distillation (Mothe)
- Alcohol distillation (Stills)

Other models

Find in our catalogue other distillation models for distillation extraction, adapted to various needs.
